Understanding Mechanical Seal Products: Types and Classifications

A comprehensive catalog begins by categorizing the core products ? mechanical seals ? based on their design, application, and operational environment. Recognizing the distinctions helps users select the right seal for their specific needs.

Types of Mechanical Seals

- Single Mechanical Seals

Single seals are the most common type, designed to handle standard fluid containment in pumps. They consist of a stationary and a rotating component, with a sealing face that contacts a mating face to prevent leakage. They are ideal for applications with moderate pressure and temperature conditions.

- Double Mechanical Seals

Double seals incorporate two sealing faces separated by a barrier fluid, providing enhanced containment for hazardous or toxic fluids. They are suitable for high-pressure, high-temperature, or environmentally sensitive applications.

- Cartridge Seals

Cartridge seals are pre-assembled, ready-to-install units that combine the seal face, spring, and gland plate into a single module. They simplify installation and maintenance, reducing downtime and human error.

- Dry-Running Seals

Designed for applications where the seal operates without lubrication, dry-running seals prevent dry contact, reducing wear and extending service life in specific scenarios like water pumps or certain chemical processes.

Material Options

The catalog offers seals constructed from a variety of materials tailored to resist corrosion, wear, and chemical attack:

- Seal Faces: Tungsten carbide, silicon carbide, carbon, ceramic
- Elastomers: Viton, EPDM, Kalrez, PTFE, FKM
